International Week

Urban Health

exceed expectations

Rotterdam University of Applied Sciences kindly invites international students and teachers to join an inter-professional study group at the School of Healthcare Studies during the international week **Urban Health**. This one-week program runs twice a year.

September (week 37)

- ▶ Around 250 students
- ▶ One subprogram:
 - ▶ Integrated Care in Deprived Areas

March (week 13)

- ▶ Around 650 students
- ▶ Three subprograms:
 - ▶ Integrated Care in Deprived Areas
 - ▶ Age-friendly Cities
 - ▶ User-centered Design in Healthcare Technology

Participation

Participation in the program is rewarded with 2 ECTS. Only incoming (international) students have the option to gain a total of 3 ECTS by adding a preparatory assignment for 1 ECTS.

The program is supported by COEHRE and open for students from COEHRE member-universities and other Erasmus+ partner-universities.

Urban Health

"We are at an unprecedented moment in human development as the greatest migration in history unfolds around us. Less than a decade ago a majority of humankind still lived in the countryside, yet today a clear majority live in urban areas. In 2030, 60% of all people will reside in cities, proportionally twice that of 1950. For most of us from now on, life and death will be an urban affair. The global community was not only waking up to this new demographic reality and the consequent implications for health, society, and economic and political affairs, but also to a host of new opportunities as humans shape and are shaped by an urban future."

(World Health Organization, 2016)

Inter-professional learning

During this international week you are challenged to think ahead and find some opportunities for making a difference in the health situation of urban citizens, both in Rotterdam and in other European cities. This intensive, inter-professional and international week provides you with a program aimed at developing your competences as an urban health professional. We hope this programme inspires you to help creating more equity and better health conditions for urban citizens in many different cities around the world.

Application

We're happy to welcome you in Rotterdam and on behalf of our staff, we wish you an interesting, enriching and eye-opening experience!
